

L-Hook:

The Laparoscopic Electrodes are electrosurgical devices, used for a variety of laparoscopic procedures through a port, for coagulation and transection of soft tissue and vessels by use of high frequency electric current.

Feature Wire L-Hook:

- ✓ Made of integrated stainless steel 304 and coated by Polyethylene Thermophytes to transfer full energy from the generator to the tip of the L-Hook.
- ✓ Compatible to all pens cautery, no need of footswitch.
- ✓ Lightweight, ergonomic handle design allows precise controller tissue dissection.
- ✓ 5mm Monopolar Wire L-Hook electrode enables the precise controlled dissection and coagulation of vessels and tissues
- ✓ Convenient, single-use instrument ensures sterility and effective monopolar current containment, preventing adjacent site tissue burn.

Ref. No	Description	Size	Length	Pcs/Disp.
